

Joseph Spillers

Support Automation & Internal Tools Engineer

I turn support pain into working tools.

Indianapolis, IN • (260) 442-2113 • jdspille@gmail.com • github.com/spilloid • linkedin.com/in/joseph-spillers

SUMMARY

CS-trained support specialist who works at the intersection of **technical support, operations, automation, and internal tooling** — strongest where the problem doesn't sit cleanly inside one system. I own the messy middle: the scripts, dashboards, data checks, and workflow fixes that make support and production operations **observable, repeatable, and automatable**. Five+ years converting fragile manual workflows into testable software with Python, PowerShell, and Go. B.S. Computer Science (Honors, 3.8 GPA), CompTIA Network+, Azure Fundamentals (AZ-900).

EXPERIENCE

Help Desk Support Specialist • One View, Inc.

Dec 2025 – Present • Indianapolis (Hybrid)

Support and harden dealership document-management workflows — scan stations, WebScan, Vault, PaperFlow, spooler services, data feeds, and production processing — and build the tooling that makes them faster and less human-fragile.

- Built internal support tooling that standardized workstation setup, scanner workflows, and endpoint decommissioning.
- Stood up operational dashboards surfacing live support and production metrics so issues are caught before they escalate.
- Wrote automation that eliminated repetitive manual tasks and improved consistency across endpoints.
- Mined case data and saved searches to flag missing feeds, no-scan accounts, and recurring issues early.
- Authored runbooks and documentation for repeatable workflows and escalation paths.

Technical Support Specialist II • Resultant

Oct 2023 – May 2025 • Remote

Tier 2 technical support at a data & technology consulting firm serving public-sector and enterprise clients.

- Diagnosed and resolved complex software and infrastructure issues across diverse client environments.
- Managed escalation workflows and drove systemic defects to resolution with engineering.
- Improved the knowledge base to cut repeat ticket volume and accelerate time to resolution.

DevOps Support Technician III • RPM Technologies

Mar 2021 – Oct 2023 • Indianapolis

Architected DevOps automation for a managed-services IT desk supporting 2,000+ endpoints across cloud, on-prem, and hybrid environments.

- Converted complex manual procedures into single-push deployment scripts (PowerShell, Bash), increasing service-desk efficiency ~30%.
- Built dashboarding and proactive alerting that maximized technician throughput and reduced client downtime ~25%.
- Introduced pre-production error catching that reduced the volume of incidents reaching clients.
- Promoted from Tier 2 to Tier 3 DevOps within 18 months; authored SOPs and training documentation.

Full Stack Software Developer • School of Science, IUPUI

Jan 2018 – Jul 2019 • Indianapolis

- Built and maintained internal web tools used by ~100 department members, eliminating paper-based workflows.
- Shipped V1 in HTML5/CSS/PHP/MySQL, then led migration to a React/Express stack for maintainability and scale.

Teacher's Assistant • IUPUI School of Science

Aug 2017 – Dec 2018 • Indianapolis

- Lectured 120+ students and facilitated a 30-person PLTL recitation group in core CS courses.
- Guided learners to root cause under time pressure — building debugging instincts, not dependency.

SELECTED ENGINEERING WORK

Sanitized capability summaries of professional work — not source.

High-Throughput Document Processing Engine Python · Streaming

PRIVATE

Single-pass streaming engine that detects and splits document boundaries, preserves the source, and stages clean output for downstream ingestion. Replaced a legacy pipeline with a ~60×+ throughput improvement.

Self-Hosted Observability Stack **PRIVATE** Grafana · Postgres · Docker

Application dashboarding and monitoring with LAN-vs-external access handling, driving live operational dashboards for a support and production team.

Financial Reconciliation Automation **PRIVATE** Python · Validation

Rebuilt a fragile recurring reconciliation from scratch — turns messy monthly exports into validated, observable PASS/FAIL results with end-to-end ownership of the process.

Internal Support Operations Platform **PRIVATE** PowerShell · .NET

Source of truth for support ops: runbooks, deployment automation, workstation provisioning, and tooling that makes day-to-day support repeatable and teachable across a team.

OPEN-SOURCE PROJECTS

NetViz Go · Wails · React

Cross-platform LAN scanner and visualizer — live device discovery, grouped graphs, monitor mode, and scan history on a fast native Go engine. No agents, no accounts, no Nmap.

ComFlow TypeScript

Turns missed calls and voicemail into structured work items so a support team stops fishing through audio scraps.

Visitor Game Engine C++

Game engine where every behavior is a Visitor and every entity a Sprite — clean double dispatch, no type switches, UML-first architecture.

pool_sim · JokeBot · Deciwatcher TS/Phaser · Python · IoT/C++

A billiards physics prototype, a Dockerized Flask joke API, and a distributed ambient-noise mapping concept. Full set at github.com/spilloid.

SKILLS

SUPPORT ENGINEERING & OPS

Technical support, escalation handling, workflow triage, endpoint provisioning, runbooks, documentation

AUTOMATION & INTERNAL TOOLS

Python, PowerShell, Go, C#, .NET / WinForms, Bash, browser automation, CLI & desktop utilities

DATA & OBSERVABILITY

DuckDB, dbt, Postgres, Grafana, dashboards, reporting pipelines, KPI tracking

INFRASTRUCTURE & SYSTEMS

Windows, Linux, Docker, Proxmox, GitHub Actions, RMM, monitoring, networking

AI-ASSISTED ENGINEERING

Claude Code, AI prototyping, doc generation, test planning, code review

EDUCATION

B.S. Computer Science

Purdue School of Science, IUPUI — Indianapolis, IN

Minor in Mathematics · Honors · GPA 3.8

Certifications: CompTIA Network+ · Microsoft Azure Fundamentals (AZ-900) · CKA (in progress)

HOMELAB

Proxmox VE hypervisor running OPNsense, TrueNAS, UniFi Gateway, and K8s-orchestrated services — hands-on infrastructure experimentation and deployment-workflow validation.
